

10

POLYMER BANKNOTE

FRONT

REVERSE

FEEL

Polymer notes feel smoother than paper.

- 1 Run your fingers over the bottom corner of the note to feel the "C" shape.

LOOK

When you hold the note up to the light you will see:

- 2 A clear window that can be seen from the front and back of the note.
- 3 The numeral 10 appearing in the dark brown coloured print.

CHECK

Using an ultra-violet (UV) light and a magnifier:

- 4 If you look at the note under UV light you will see that some areas of the note glow.
- 5 If you look at the note under magnification, some areas that appear as plain print are in fact very small letters and numbers.
