

KNOW YOUR NEW

100

POLYMER BANKNOTE

FRONT

REVERSE

FEEL

Polymer notes feel smoother than paper.

- 1 Run your fingers over the bottom corner of the note to feel the X.

LOOK

When you hold the note up to the light you will see:

- 2 A clear window that can be seen from the front and back of the note.
- 3 The number 100 appearing in the blue print.

TILT

As you move the note around you will see:

- 4 Areas with a shimmering gold ink.

CHECK

Using an ultra-violet (UV) light and a magnifier:

- 5 If you look at the note under UV light you will see that some areas of the note glow.
- 6 If you look at the note under magnification, some areas that appear as plain print are in fact very small letters and numbers.

For more details on the security features of the notes, see the Bank's website:
www.central-bank.org.tt
Facebook page and YouTube channel.
