

# 50

## POLYMER BANKNOTE

### FRONT

### REVERSE

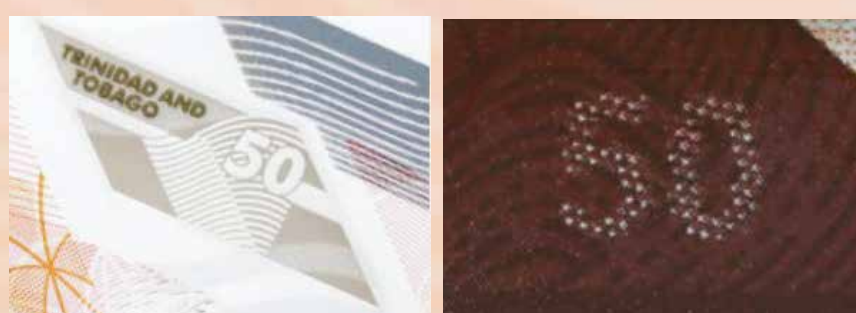

### FEEL

Polymer notes feel smoother than paper.

- 1 Run your fingers over the bottom corner of the note to feel the "circle" shape.

### LOOK

When you hold the note up to the light you will see:

- 2 A clear window that can be seen from the front and back of the note.
- 3 The numeral 50 appearing in the brown coloured print.

### TILT

As you move the note around you will see:

- 4 Areas with a shimmering gold coloured ink.

### CHECK

Using an ultra-violet (UV) light and a magnifier:

- 5 If you look at the note under UV light you will see that some areas of the note glow.
- 6 If you look at the note under magnification, some areas that appear as plain print are in fact very small letters and numbers.
